TECHNICAL SKILLS

- Languages: Python, Java, C++, SQL, HTML
- Frameworks: FastAPI, Docker, Android Studio
- AI / LLMs: Ollama, Gemini, OpenAI, Agentic RAG
- Automation: n8n Workflow Automation
- Data: Qdrant Vector DB, TensorFlow
- Tools: GitHub, VS Code

SPECIALIZATIONS

- Agentic RAG & Knowledge Pipelines
- Multi-Tenant AI Chatbots
- Workflow & Business Process Automation
- Machine Learning Fundamentals

LANGUAGES

English: Proficient
Urdu: Native / Bilingual

AHTISHAN YOUNAS

AI Automation & Agentic RAG Developer

ABOUT ME

Graduate in Software Engineering specializing in AI Automation, Agentic RAG, and LLM Integration. Experienced in building custom knowledge pipelines, multi-tenant chatbots, and web widgets using Python, FastAPI, Docker, n8n, and LLMs. Focused on developing reliable, production-ready AI tools for real business workflows.

EDUCATION

Bachelor of Science in Software Engineering

University of Management and Technology (UMT), Lahore, Pakistan | Sept 2022 - Feb 2026

FSc (Pre-Engineering)

Punjab Group of Colleges (PGC), Gujranwala, Pakistan | Jan 2020 - Dec 2022

Matriculation

Angels School System, Daska, Pakistan | Feb 2018 - Nov 2020

WORK EXPERIENCE

AI Automation & RAG Developer

Computing Edge, Lahore | 4 Months

- Engineered custom RAG pipelines and autonomous AI workflows using n8n, OpenAI APIs, and vector databases.
- Integrated multi-channel AI chatbots across Slack and Email for internal and client-facing use.
- Managed team workflows, daily asynchronous updates, and activity tracking via Slack and enterprise project management tools.
- Connected external APIs and internal knowledge bases to streamline enterprise document retrieval and data automation.

PROJECTS

WhatsApp AI Appointment Booking Agent

- Built an end-to-end appointment booking agent on n8n, using the Meta WhatsApp Business Cloud API and an Ollama-powered AI Agent to understand customer requests in natural language.
- Designed a RAG knowledge layer that parses business PDFs to retrieve service details, doctor's name, qualification, and location for each service (Dental Cleaning, Eye Care, Physiotherapy), so the agent can answer service-specific questions in real time.
- Captured customer personal details (name, phone number, requested service, fees) and checked live slot availability via Google Calendar before confirming any booking.
- Logged every confirmed appointment to a Google Sheets database (Name, Service, Date, Time, Phone Number, Booked At) for record-keeping and reporting.
- Sent automated WhatsApp confirmation replies to the customer and forwarded the complete appointment details to the business owner's Gmail for real-time notification.

Full-Stack AI Automation & Multi-Tenant RAG Platform

- Built a multi-tenant AI automation platform (FastAPI, Python, Docker) supporting both local (Ollama) and cloud (OpenAI/Gemini) LLM providers, so clients can choose their own deployment model.
- Implemented an Agentic RAG pipeline with hybrid dense + BM25 retrieval for private document ingestion, enabling accurate, source-grounded chatbot responses.
- Developed a lightweight, embeddable JavaScript chat widget that lets clients add the AI bot to any website with a single <script> tag.
- Added multi-language support (English, Urdu, Arabic) with strict enforcement and a localized/RTL UI, plus lead capture and conversation logging for agency use.
